Software Developer

Software Developer with 3+ years of experience specializing in backend and web development using PHP, SQL, and Linux-based environments. Proven ability to maintain legacy systems, mentor interns, and support cloud migration initiatives. Highly adaptable and quick to learn new technologies, with a passion for building clean, scalable systems.

Education

University of Cebu Lapu-lapu and Mandaue

Bachelor of Science in Information and Technology

July 2023

Experience

Talleco Job Target Philippines

Software Developer Intern

Cebu City, Philippines

July 2022 – February 2023

- Utilized our in-house scraping tool to extract job postings from various job boards using XPath selectors on front-end elements.
- Analyzed and interpreted the structure of job websites to identify relevant data fields (e.g., job title, location, description).
- Configured scraping templates using Twig and define ETL (Extract, Transform, Load) mappings to correctly populate the front-end with scraped data.
- Ensured data accuracy, cleanliness, and completeness throughout the scraping process.

Junior Software Developer

February 2023 – October 2024

- Lead onboarding and training sessions for new interns, ensuring smooth integration into team workflows and tools.
- Review and validate ETL (Extract, Transform, Load) changes submitted by team members before merging to the central repository, ensuring code quality and data accuracy.
- Work closely with the team to fix any issues or missing information in the job data.

Mid – Level Software Developer

October 2024 – Present

- Develop new features and resolve bugs across multiple legacy repositories—both front-end and back-end (job-input, job-process, spider-legacy, int-admin)—running on Linux servers with legacy PHP.
- Built utility tools within the admin platform to support import configuration developers in managing client-specific settings efficiently.
- Utilize Confluence to create clear and comprehensive documentation for legacy projects, aiding future developers in understanding system architecture and logic.
- Integrate new partner APIs into the job-input system, ensuring compatibility and proper data handling.
- Continuously adapt and refine the job-processing logic in response to evolving business requirements and workflows.
- Collaborate with the DevOps team to support the migration of on-premise servers to AWS EC2, ensuring a smooth and efficient transition.
- Contribute to and lead legacy system migrations to modern technologies such as TypeScript and AWS, adopting event-driven architectures for improved maintainability and scalability.

Skills

Languages & Frameworks: PHP, JavaScript, Laravel, Typescript, SQL, Twig, HTML, CSS, AWS

Tools & Platforms: Git, Linux, Bash, Docker

Soft: Team player, Adaptable, Communication, Documentation, Problem Solving
